The skull was roughly triangular in profile, with no bony cranial crest. Viewed from above, the front and rear of the skull were expanded, with the broad front forming a duck-bill or spoon-bill shape. The beak was toothless, and both the upper and lower beaks were extended by keratinous material...Lull, Richard Swann; and Wright, Nelda E. (1942). "Hadrosaurian Dinosaurs of North America". pp. 110–117.
